## Hosting Requirements

- Operating System: Linux 64-bit
- Web Server: Apache Web Server 2.4.7
- PHP: PHP 5.5.9
- Database: MySQL Server 5.5.38
- Wordpress Version: Wordpress 3.9
- WooCommerce Version: WooCommerce 2.2.8
- WC Autoship Version: WC Autoship 2.0

## Installation

### Install and Configure Required Plugins

1. Extract the archive to the plugins folder of your Wordpress site (usually /wp-content/plugins/).
2. Log in to Wordpress as an administrator and navigate to the Plugins list. Find and activate the WC Autoship Payflow Payments plugin.
3. Navigate to WooCommerce > Settings > Checkout > WC Autoship Payflow Payments
4. Complete the fields in the WC Autoship Payflow Payments settings form. See reference section A for field descriptions. Make sure that this payment gateway is enabled.

## Payment Gateway Settings

### Required Payflow Pro Account Settings

1. Reference Transactions must be **enabled**.
2. In sandbox mode, Fraud Protection Service must be **disabled** to process test credit cards.

# Testing the Payment Gateway

## Testing Checkout

1. Add a product to the shopping cart with a selected Auto-Ship option.
2. Navigate to the checkout page.
3. Select the Payflow Pro payment method (titled "Credit Card" by default).
4. Enter a test credit card into the payment fields:
  1. **Number** 4111111111111111
  2. **Expiration** (*any future date*)
  3. **CVC** 123

If the checkout is successful, a new order will be created, and a new Auto-Ship schedule will be available on the My Account page.

## Testing Auto-Ship Schedules

1. Navigate to the My Account page. You should see your Auto-Ship schedules at the top of the page.
2. Click the button to Change Billing.
3. Select the Payflow Pro payment method (titled "Credit Card" by default).
4. Enter a test credit card into the payment fields:
  1. **Number** 6011111111111117
  2. **Expiration** (*any future date*)
  3. **CVC** 123

If the update is successful, the Payment Info section will be updated with the new card.

## Reference
